

Epics on K8s for a Control as a Service

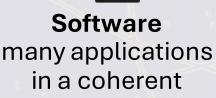

Riccardo Gargana

Workshop CCR 2024 - 20-24/05/2024

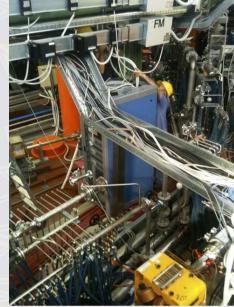

Control systems for scientific installations

framework

Plant = many devices

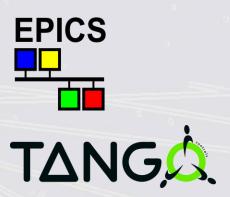

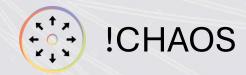

Features

- Actuation
- Monitoring
- User friendly interface
- Data logging & retrieval
- Openness to external apps

Accelerators
Detectors (slow control)
Telescope arrays
Experimental setups

. . .

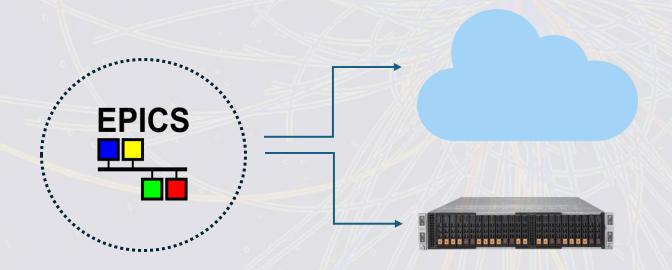

Many other custom solutions...

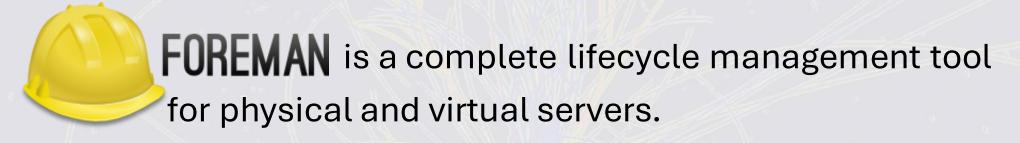

Why not to provide a CaaS (Control as a Service)?

- It fully meets the INFN mission;
- There is a large catchment area completely disregarded;
- We have already done a pilot project of it (!CHAOS INFN flagship project, funded by MIUR);
- !CHAOS is running on K8s (Really! Right now!) on some LNF facilities;
- We are using this approach for the SSRIP project in Romania (formerly ELI-NP).

Provisioning K8s on Bare Metal

PXE, DHPC and KICKSTAR file

4 X Server con Rocky Linux 9

K8s Cluster configuration

puppet is a software configuration management tool which includes its own declarative language to describe system configuration.

Module using from puppet-forge:

puppetlabs-kubernetes version 8.0.0 puppetlabs-helm version 4.0.0 (Patched in baltig)

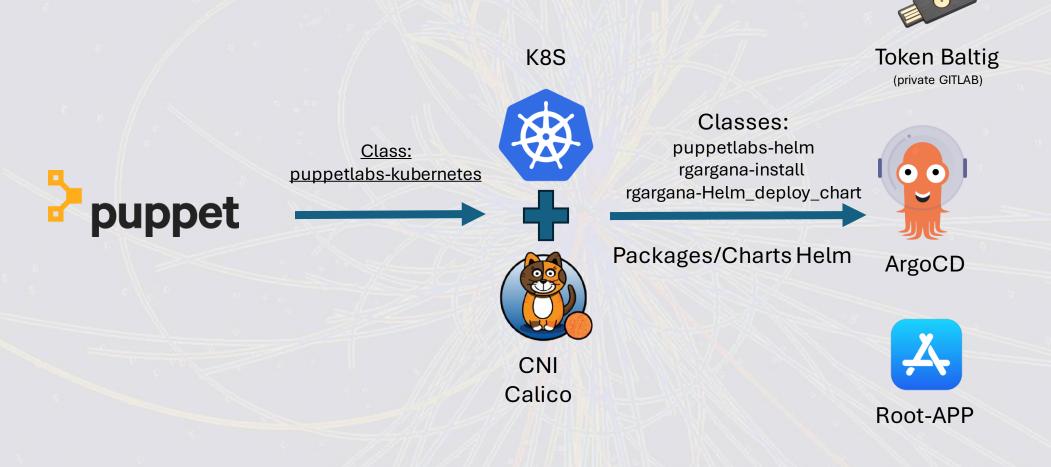

Module create purpose:

rgargana-helm_deploy_chart (in baltig) rgargana-installer (in baltig)

Workflow deploy Infrastructure

ArgoCD

Baltig Token access

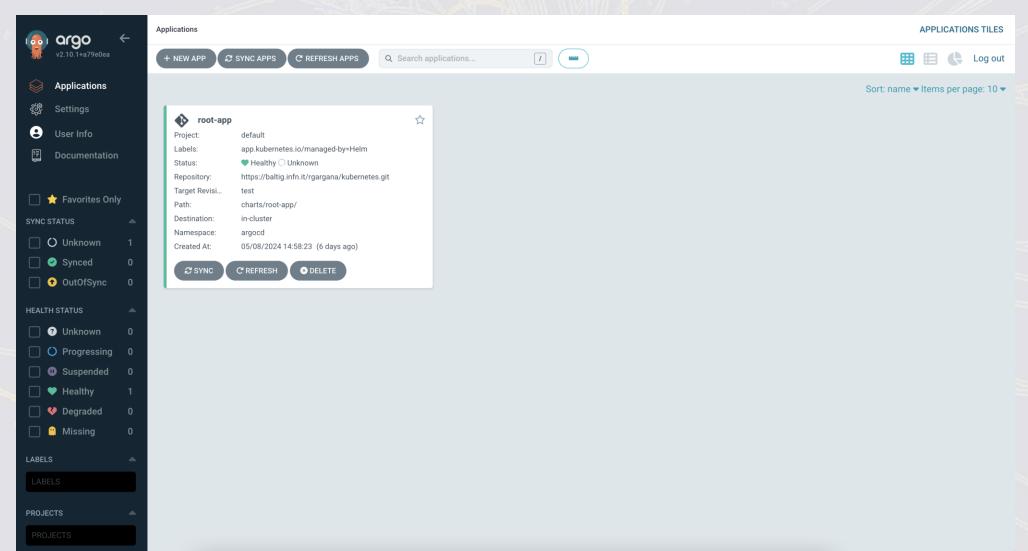

Argo CD is a declarative, GitOps continuous delivery tool for Kubernetes.

Root-APP is ArgoCD application, is used to automatically deploy other services included in the owner's Git/Baltig repository.

Kustomize into ArgoCD

Kubernetes native configuration management

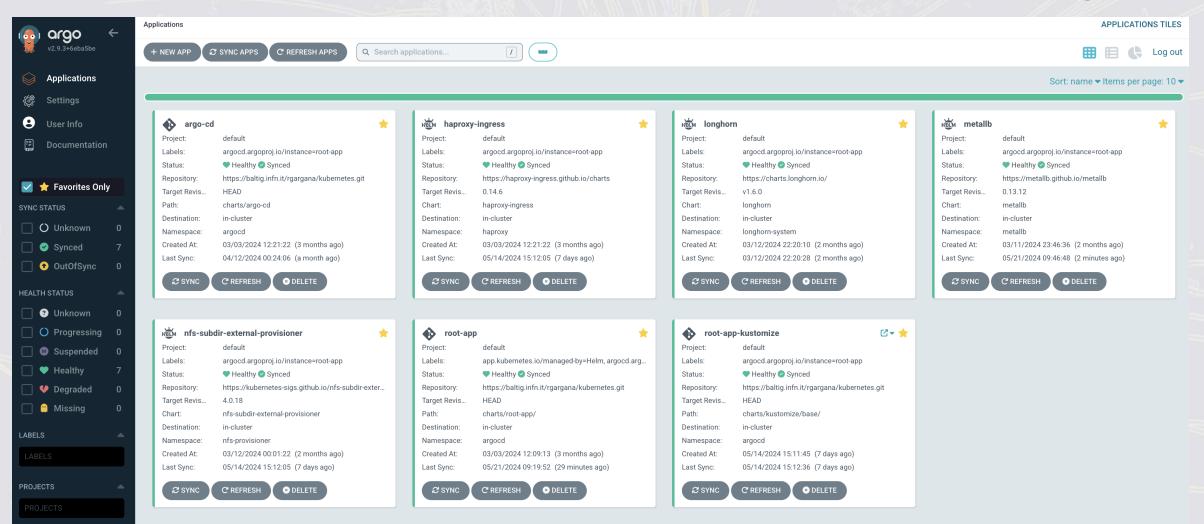

Kustomize introduces a template-free way to customize application configuration that simplifies the use of off-the-shelf applications.

CLUSTERS

Overview Dashboard ArgoCD

Provisioning OKD on vSphere

by Ramon Orrù

Terraform (Infrastructure as code) creates bastion host & service account privileges

Ansible sets up bastion host and compiles install config

OKD installer brings up whole cluster

Installation takes approx. 45 mins

OKD Cluster configuration

Kustomize allows maintaining a cluster configuration efficiently

vSphere storage drivers support PVs dynamic allocation out of the box, even with CSI compliance

ArgoCD enables gitops features and keeps apps in sync

Why OKD?

IPI/UPI automated installer

- OTA updates
- CNI drivers
- CSI drivers
- Complete dashboard
- Ingress
- Monitoring platform
- Log ingestion
- Alerting
- Registry
- Auth connectors
- Operators marketplace
- KubeVirt (VMs)

Out of the box

K8s in INFN Cloud + ArgoCD

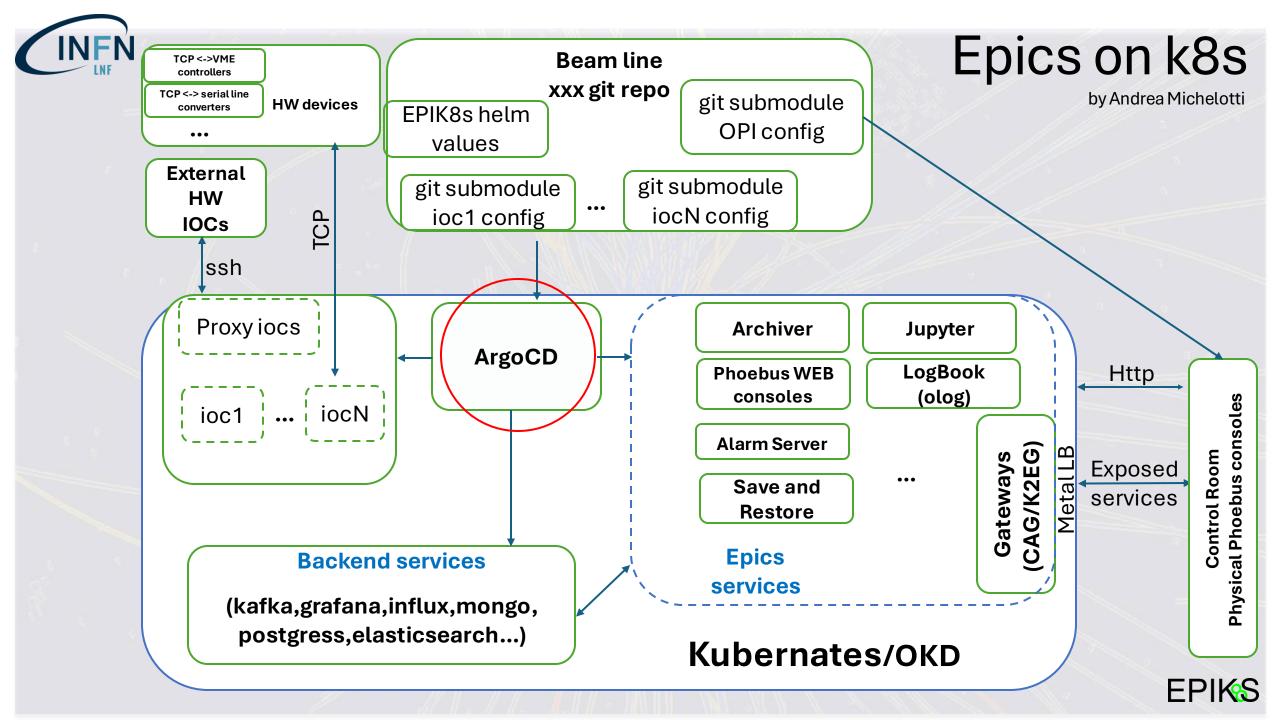

Spark + Jupyter cluster

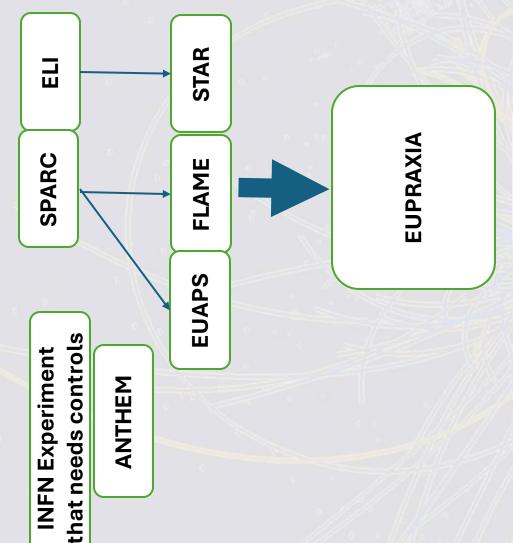

EPIK8s a common platform for INFN experiments that needs EPICS controls

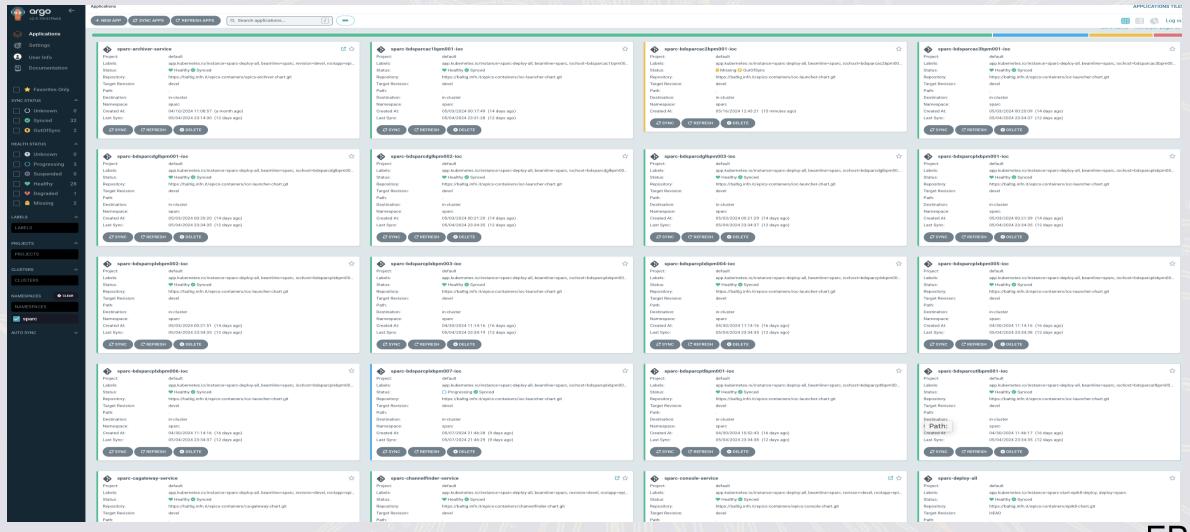

ANTHEM

With standardized workflows and tools provided by a predefined platform, a database of controls, interfaces, and common procedures will be established. This platform will gradually become more comprehensive and refined, simplifying the installation of full-featured EPICS controls in our experiments.

> THIS IS THE MISSION OF "RETE EPICS INFN" epics@lists.infn.it
